Title : Study of the Possibility of Utilization by the Fruit and Vegetable Industry of Fruit of the Strawberry Tree Arbutus unedo L.

Orig Pub : Kemija u dindustriji, 1956, 5, No 6, 113-117
(Serbo-Croatian; French, English and German summaries)

Abstract : Study of chemical composition and technological characteristics of the fruit. It is shown that the fruit have a high content of dry residue (28.2%), sugars and pectin, and are an abundant source of vitamins (thiamine, riboflavin, nicotinic and ascorbic acid), iron and mineral salts, which render them a valuable food product. Technological tests have shown that fruit of the strawberry tree can be successfully utilized for the preparation of

TITLE: Some Tests of the Hygienic and Nutritive Quality of Our Tomato Concentrates (Neka ispitivanja higijenske i prehrambene kvalitete naših koncentrata od rajčica)

PERIODICAL: Kemija u industriji, 1958,⁷ Nr 10, pp A-53-55

ABSTRACT: The author deplors the haphazard state of tests of the hygienic quality and state of preservation of tomato concentrates in Yugoslavia. No general test standards exist. The Department of Food Hygiene of the Centralni higijenski zavod (Central Institute of Hygiene) in Zagreb in 1954-1955 carried out tests on the quality of tomato concentrates produced in several Yugoslavian plants. The concentrates were subjected to tests for: 1) bacteria, enzymes, spores and mould by the Howard-Stephenson method of microanalysis 2) dry mass, 3) copper content, 4) vitamin C, 5) pH Value. For the tests concentrates ranging from 1-6 months old were used. The results are drawn up in Tables 1, 2, and show wide divergences both between individual batches from the same plant and between batches from separate plants. The results indicate the great importance of separating healthy

Card 1/2

Paravertebrálna infiltrácia lumbosakrálnych koreňov Paravertebral infiltration of the lumbosacral roots Neurol. psychiat. casl. 1952, 15/1-2(35-38) Illus. 3 The authors worked out a method of infiltrating the lumbosacral roots in which a lead plaque is shown on the X-ray film. The position of this plaque is simultaneously marked on the skin and serves as a point of orientation. The method is simple, exact and safe. The localization of the affected segments is very accurate. The infiltration was performed in 42 cases.

Title : Changes of Nitrogen Balance in Chronic Pain

Orig Pub: Crskosl. gastrocenterol a vyziva, 1956, 10, No 6, 391-399.

Abstract: Urinary nitrogen elimination, as observed in 14 patients with nervous and psychiatric diseases was greater during periods of pain than in the absence of pain. Administration of analgesics succeeded in lowering nitrogen excretion in urine. It is the opinion of the author that the central nervous system may have an effect on protein metabolism and that it is necessary, in order to restore the protein metabolism in patients with

"Study of EEG in Liver Diseases with Special Reference to Protein Metabolism."

Prague, Ceskoslovenska Neurologie, Vol 29, No 3, May 66, pp 169 - 176

Abstract /Authors' English summary modified/: Following up of the EEG in patients hospitalized with hepatic encephalography is discussed. The disease occurred in 8 patients out of 53 hospitalized with liver cirrhosis. EEG is more sensitive than the neurological examination. EEG changes are normalized after oral administration of 5-hydroxy-tryptophane, anabolic steroid hormones, antibiotics, and after restriction of protein intake in the diet. Tests with administration of high amounts of protein to 13 patients with compensated liver cirrhosis and to 7 healthy controls indicated that administration of proteins has little value as an activation test of liver diseases. 2 Figures, 4 Table, 25 Western references).
